

Code of Federal Regulations

This Section of CFR is No Longer Current.

Sec. 33.63

Part 33 AIRWORTHINESS STANDARDS: AIRCRAFT ENGINES	
Subpart E--Design and Construction; Turbine Aircraft Engines	

Sec. 33.63

Vibration.

[Each engine must be designed and constructed to function throughout its operating range of rotational speeds and engine power without inducing excessive stress in any engine part because of vibration and without imparting excessive vibration forces to the aircraft structure.]

Amdt. 33-10, Eff. 3/26/84
